SUMMARY

Senior full-stack developer and team lead with 5+ years building and shipping production marketplace and on-demand apps across web and mobile. I specialize in the parts that make or break these products — two-sided provider/customer flows, booking and scheduling, payments, and real-time features — in React Native (iOS + Android), Next.js/React, and Node/NestJS. I take products from client requirements through to App Store and Play Store release, and build on scalable monorepos with reusable packages. 15+ products shipped.

CORE SKILLS

Mobile React Native, Expo, Redux • iOS + Android release ownership

Web Next.js, React.js, TypeScript, SASS/Tailwind

Backend Node.js, NestJS, Express, Koa.js, REST APIs

Data MongoDB, PostgreSQL / PostGIS, MySQL

Cloud & DevOps AWS, Azure, Firebase, Vercel, Docker

Integrations Razorpay, Stripe, PhonePe SDK, Agora A/V, Google Maps, HubSpot, Descope, WhatsApp Business API, SendGrid

Ways of working Monorepos, reusable packages, i18n, testing (Jest, Playwright), Agile/Scrum, team leadership

SELECTED WORK

WorklyNow **On-demand services marketplace** *React Native • Next.js • Node.js • PostGIS • Azure • Monorepo*

- Problem: home & commercial services were booked through phone calls and unreliable contractors, with no upfront pricing, tracking, or trust layer.
- Built a multi-sided marketplace supporting scheduled, Uber-style on-demand emergency, diagnostic, and quote-based bookings — web app, customer app, and provider dashboard from one shared monorepo.
- Engineered PostGIS proximity matching to dispatch the right available provider in real time; owned the booking lifecycle, provider side, and release to both stores.

SqftDreams **Real-estate / builders platform** *React Native • Next.js • Node.js • HubSpot • Monorepo*

- Built a multi-role real-estate platform with a builder/admin dashboard, shipping web and mobile from a single shared codebase. – Integrated HubSpot CRM sync to automate property listings and lead capture, removing manual data entry between the app and sales pipeline.

Texflow **Two-sided garment-work marketplace** *Next.js • React Native • NestJS • MongoDB*

- Delivered a full-stack, two-sided marketplace connecting garment workers with employers — job postings, a social feed, and candidate profiles — across web, mobile, and backend.
- Shipped to both the App Store and Play Store.

Second Consult **Telemedicine & tele-radiology** *React Native • Agora • Razorpay*

- Built patient and doctor portals for primary consultations, second opinions, and tele-radiology, with live audio/video via Agora, scheduling, chat, and Razorpay payments.
- Delivered across web and iOS, coordinating separate patient and doctor apps around a shared booking and consultation core.

ADDITIONAL PROJECTS

Sharpz (US sports-betting community) — led the team building web + mobile with a near real-time bet-sharing feed and an intelligent ranking system. **EffiHR** (HRMS) — onboarding, attendance, and payroll app with a custom calendar, Descope auth, and push notifications; iOS + Android.

GreetKaro (e-commerce) — personalized cards app with a custom image editor and multi-gateway payments (Razorpay, Stripe, PhonePe) plus in-app purchases. **iModel** (fashion) — clothing-store app with a curated feed, delivered end-to-end as a monorepo. **OPEN SOURCE &**

SIDE PROJECTS

Real-Estate Escrow — Escrow.com API integration with webhook-driven status sync and deadline tracking (Next.js/TS). **WhatsApp Business API + AI** — conversational messaging service wiring the WhatsApp Business API to OpenAI (Node/Express).
